

## **SB Restoration Firefighting Equipment Care Complete Professional Fire Truck Detailing**

**SB Restoration's complete professional fire truck detailing keeps vehicles safe and clean from dirt, bacteria, germs, and carcinogens.**

From experience, we know there are several recovery steps necessary after a fire, recovery steps that must be completed before attending to the next emergency. One of those critical steps is to clean and sanitize equipment. If you are short on time and have limited cleaning resources, we would like to help.

**Our SB certified cleaning team handles the interior detailing, an effective and safe solution. This is the same process we use for restoring and cleaning after a fire and smoke damage.**

- Our mobile services allow us to conveniently clean the vehicles at your fire hall.
- The average size fire engine from start to finish takes approximately 4-hours to detail.
- Our detailing product and soft water are proven to remove dirt, germs, and carcinogens. The product used is effective and they are safe cleaners that will not damage the interior.
- Our truck mounted cleaning unit is up to 20-times more powerful than any electric powered portable machine. This powerful extraction removes stains, grease, smoke, and fire residue.
- We can clean with a temperature in upwards of 225 degrees. This intense heated water temperature not only is a powerful cleaner, it also kills bacteria and germs.
- We will ATP swab test surfaces prior and after a job to accurately measure sanitation levels.

### **SB Restoration Fire Truck Interior Cleaning Process**

*No matter the size or condition, each vehicle receives the same attention to detail because we know how critical it is to have the interior clean and healthy.*

We will meet to determine what you do not want cleaned and the items that should be removed from the vehicle prior to our team starting the job.

Areas containing dust and dirt will be vacuumed (floors, under floor mats, seats, under the seats, crevices between seats, center counsel area, dash, air vent dividers, and storage cubby holders.)

The Complete inside area from floor to ceiling is hand washed and scrubbed (floors, walls, ceiling, under floor mats, seats, under the seats, crevices between seats, center counsel area, dash, air vent dividers, door sideboards, door handles, steering wheel, and storage cubby holders.)

Once the hand cleaning process is completed, we use the hot water extraction to clean seats, seatbelts, floors, and mats. If hand cleaning does not leave the walls and ceilings cleaned to our satisfaction, we will also use the hot water extraction on these areas.

Windows and mirror inside and out are cleaned and shinned.

Inspection and ATP testing will be done to ensure the vehicle meets a healthy standard and is cleaned to your satisfaction.

# SB Restoration's Plan of Action Supporting Local Community Fire Departments

**Cleaning Vehicle Service-** Interior vehicle cleaning with ATP testing.

- Rate is based on time required to clean the vehicle.
- Travel fee may apply.
- Any additional fees will be disclosed prior to cleaning.

**SB's Donation Program-** When calling to schedule your cleaning, ask us about our donation cleaning service and the fire department training program.

- The training program is conducted by a local firefighter trainer (Fire-Coping-Rebuilding)

For scheduling and questions, call us at 320-255-0076.

We look forward to providing you with our service and support.

Sincerely,

John Muller, Owner, and staff
