Mold – SB Cure

Mold can form quickly and get out of control as a result of damp areas, flooding, sewage backup, leaking roofs, damaged pipes, excess humidity caused by a faulty air exchange system, etc.

Molds survive in damp or wet environments. It can be found on the outside of walls, behind walls, within a shower, inside the ventilation system, inside an attic and many other areas of your home or business that can be structural damaging.

When mold spores are present in abnormally high quantities, they can present especially hazardous health risks to humans and pets after prolonged exposure, including allergic reactions or more serious health conditions. If you suspect you have mold issues, contact SB Restoration for a professional mold remediation Goldmorr certified technician 24/7 Emergency Service 320-255-0076.
